

services

Humane assessment is a software engineering method that makes the activity of assessment explicit and manageable.

We offer a set of service packages that cover the all aspects of assessment. The packages can be combined and customized based on the client needs.

daily assessment coaching

coaching stakeholders

The first step is to learn to specify the concerns explicitly. The second step is to learn how to interpret the analysis results and transform them into actions. The final step consists of learning to initiate and steer the overall assessment effort.

For best results it typically requires each stakeholder to invest:
14 weeks of 30 min / day / person

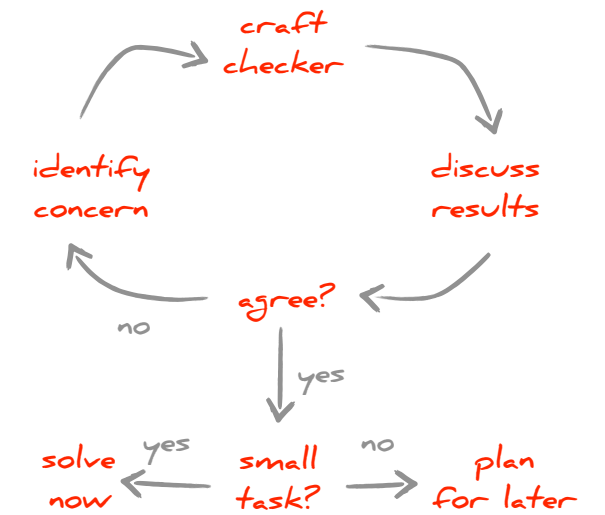

coaching facilitators

First, facilitators have to learn to work with stakeholders to identify valuable concerns. Second, they have to learn to craft checkers fast. Finally, they have to learn to facilitate and ensure that stakeholders actively reach decisions.

For best results it typically requires each facilitator to invest:
14 weeks of 1 - 2 days / week

The objectives of daily assessment are to identify problem areas, and to check and improve architecture concerns on a daily basis.

strategic assessment

The objective of such a project is to support strategic decisions concerning a system or a portfolio of systems. The project involves working closely with the stakeholders, and it can be accompanied by a report.

A typical scenario is provided by the analysis of a legacy in-house or outsourced project with the goal of checking its conformance to wanted standards and designs.

Another typical problem is to support the estimation of a strategic decision to rewrite or reengineer a system.

tooling buildup

The objectives of a tooling buildup is to produce larger analysis tools tailored to the context of the system at hand. These tools can be used in several assessment scenarios.

Examples of such tools are importers for domain-specific or proprietary languages.

Typically, the effort is measured in weeks of engineering effort.

installing an assessment department

The main objective of setting up an assessment department is to internalize the know-how of building analysis tools and of supporting daily, spike and strategic assessment projects.

Typically, this project follows or takes place simultaneously with a project of Daily Assessment Coaching.
